

2009 MIS

Faculty-Level Research Associate, Medical University of South Carolina,
Charleston, SC

The distance education portion of the MIS program allowed me to get my masters while remaining employed as a full-time statistician. I was able to apply information from my courses to the projects I was currently working on at my job. This both reinforced what I was learning in the classroom and allowed me to provide new solutions for reporting at work. The program also prepared me to accept a new job in clinical trials. I would highly recommend the program. I received both my B.S. and MIS from the Department of Statistics at the University of South Carolina and feel that the professors and department as a whole have been very supportive and instrumental in furthering my career.
