Statistical Analyst - Predictive Modeler Chicago, Illinois

As a Statistical Analyst - Predictive Modeler I would like to say that the USC Graduate Program in Applied Statistics (formerly Industrial Statistics) gave me a valuable fundament of knowledge that I now utilize in my current professional role. As the name of the program says, it consists mainly of applied courses. They are taught by excellent professors who emphasize the skills students need as professionals working in industry.

The option to not attend classes and watch their recorded versions gave me the advantage of taking the program without interrupting my regular job. Thus, I highly recommend this program for people who want to pursue a Graduate Degree in Statistics and don't have the ability to stop working at the same time. It was a pleasure for me to be a student in the Department of Statistics and I am proud to be a USC graduate.
